Subject: Microsoft Settlement

MS has created thousands of jobs and has contributed to technical advancement and a much more prosperous country. Competitors, who are unable to compete, should not be rewarded. I was a Software engineer (not at MS but another company) and I feel very strongly that MS should not have been brought to trial in the first place, much less punished. If someone builds a better OS or a better internet service, then more power to them but the government should not be interfering.
